CERTIFICATE

This is certified that the project entitled as

″ Farmart - Grocery″

Has been successfully delivered by

MS. Shital Shivaji Navle

Studying B.Sc(C.S.) Third Year (VI Sem.)
As a requirement for fulfilment of Curriculum
leading to the degree

"B.Sc.(C.S.)"

During the year

2025-2026

DECLARATION

To,

The principal,

Mit College Of Computer Science & It

Basmath - 431512,

Dist. Hingoli

Respected Sir,

We declare that the project entitled “Farmart-Grocery” presented by us. It’s all work is done by us under the guidance of Prof. Bhosle S.R

Thanking You,

Yours Sincerely

M.S Shital Shivaji Navle

ACKNOWLEDGEMENT

It is indeed a great occasion for us to express us gratefulness to our Principal **Mr.Kale.S.R** and project guide **Prof.Bhosle.S.R**. for providing guidance and co-operation that was indispensable at all stages during our project preparation

We also express a sincere thanks to HOD Jadhav N.R, Prof. Bhosle S.R
Prof. Kamble M.V, & Prof. Tak A.A

Who help requirement gathering for their valuable suggestion and encouragement making of this project preparation.

And finally, we express our thanks also to friends and other persons for their valuable suggestion.

Yours Sincerely,

MS. Shital Shivaji Navle

Introduction

Farmart – Your Online Grocery Shopping Partner
Farmart is a modern and user-friendly online grocery shopping application designed to make your daily shopping easier, faster, and more convenient. Built using HTML, CSS, Tailwind CSS, JavaScript, React.js, Node.js, Express.js, and MongoDB, Farmart delivers a smooth, responsive, and secure experience for every user.

Our platform allows customers to explore a wide range of grocery products, add them to their cart, and complete their orders with a seamless checkout process. We've integrated Email JS and Node mailer for instant messaging and order confirmations, ensuring clear communication with users. For enhanced security, we use trusted payment packages along with robust email and password protection, keeping every transaction and user account safe. The intuitive UI provides a fast and responsive interface across all devices, offering a delightful shopping experience every time.
Farmart – Freshness delivered to your door with speed, security, and simplicity.

Features

- Easy online grocery shopping
- Fast and responsive interface
- Secure authentication
- Secure payment gateway
- cart and order management
- Email notifications
- MongoDB database integration
- Password and email security
- Admin dashboard
- Ratings and reviews system
- Smooth checkout experience
- Product search and filtering
- Category-based browsing
- Real-time order tracking
- User profile management

Objectives

- To provide a convenient platform for online grocery shopping
- To ensure fast, smooth, and responsive user experience
- To maintain secure user authentication and payment processing
- To offer real-time order tracking and updates
- To simplify grocery management for both users and admins
- To deliver instant email notifications and confirmations
- To ensure data security and reliability using MongoDB
- To create an intuitive and user-friendly shopping interface
- To build a scalable and efficient full-stack web application

Introduction About Used Technologies

HTML

HTML (HyperText Markup Language) is used to structure the content and layout of the Farmart application. It defines the basic framework for all web pages, including sections, forms, images, and links. It works as the foundation upon which styles and functionalities are added. Every visual element starts with an HTML structure, making it essential for building the user interface.

CSS

CSS (Cascading Style Sheets) is used to design and style the web pages of Farmart. It controls the colors, fonts, spacing, and layout of each component. By separating content from design, CSS ensures that the app looks clean, attractive, and well-organized. It helps create a consistent and responsive design across all devices.

Tailwind CSS

Tailwind CSS is a utility-first CSS framework used to build fast and responsive designs. It allows quick styling with pre-built classes, reducing the need to write custom CSS. In Farmart, Tailwind helps maintain a consistent design system and speeds up the development process. It ensures the UI looks modern and adapts well to mobile, tablet, and desktop screens.

JavaScript

JavaScript adds interactivity and dynamic behavior to the Farmart website. It handles features like product filtering, form validation, and real-time updates. By working alongside HTML and CSS, JavaScript makes the pages more engaging and functional. It allows users to interact smoothly with different parts of the app without reloading the page.

React.js

React.js is a JavaScript library used to build the frontend of Farmart. It enables the creation of reusable UI components, making development faster and more efficient. React handles state management, routing, and dynamic rendering of data. This makes the app responsive, fast, and easy to update. It also improves user experience with smooth navigation and real-time content updates.

Node.js

Node.js is used to build the backend of the Farmart application. It allows JavaScript to run on the server side, handling user requests and connecting with the database. Node.js manages operations like authentication, payments, and order processing efficiently. Its non-blocking architecture ensures fast performance and scalability.

Express.js

Express.js is a web application framework for Node.js that simplifies backend development. It helps create APIs to manage products, users, and orders in Farmart. Express handles routing, middleware, and server logic easily. It plays a key role in linking the frontend with the database and ensuring smooth data flow between them.

MongoDB

MongoDB is a NoSQL database used to store all the application data securely. It holds information about users, products, carts, orders, and reviews in a flexible, document-based format. MongoDB provides fast data retrieval and scalability, making it ideal for an online store. It ensures that the Farmart app runs efficiently even as data grows
